

**Project: The Wellesley Yacht**

**Client: Saba Shipping**

**Sector: Marine**

**Duration: 11 months**

**The Wellesley Yacht is an extension of the luxury Wellesley Hotel in Knightsbridge and was designed in the same style, design and attention to high quality finishes and systems**

**The entire boat was entirely refurbished and NM Cabling's remit was to install a distributed Television and Audio system throughout the 4 Bedrooms, Saloon and Games room**

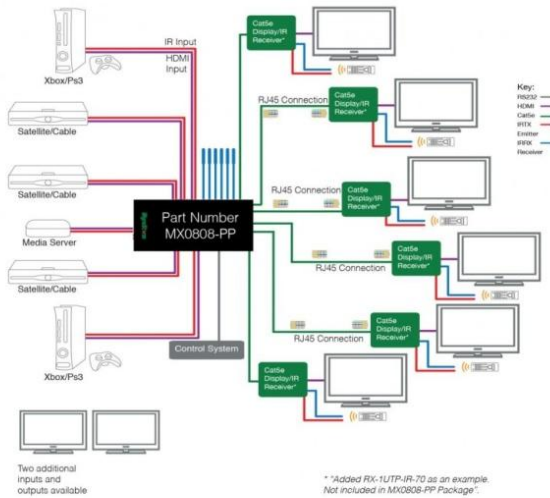

**The focus was on being able to create a high end system that could also be contained into the small confines of a yacht**

**The yacht was also refurbished in Loana, Italy to add to the challenge**

**The communications area, cable ways and termination points had to be cleverly incorporated due to lack of space and the requirement to not encroach on the fine finishes and design of the boat**

**This required a constant project management presence at every critical stage of the development of the yacht, and was managed from the UK as well as on site in Italy**

To distribute the 6 satellite boxes throughout , a 8 x 8 WyreStorm Matrix was incorporated and everything was communicated using HDMI over Cat6 systems. This gave the yacht flexibility and the ability to upgrade from one central point

This was all contained within one central control cabinet

Centrally based Sonos was used for the audio system due to its ability to be flexible and the ease of use for guest charters , such as being able to play their own music directly onto the system as well as use the central music library

Special attention was also given to the speakers throughout the boat and any equipment that was fitted. All speakers had to be marine grade due to high exposure to salt and the elements.

All the equipment had to be firmly secured and bolted down, including control leads due to the nature of the excessive movement of the boat during transport and the possibility of equipment jarring loose
