

Project: Bournemouth Pier

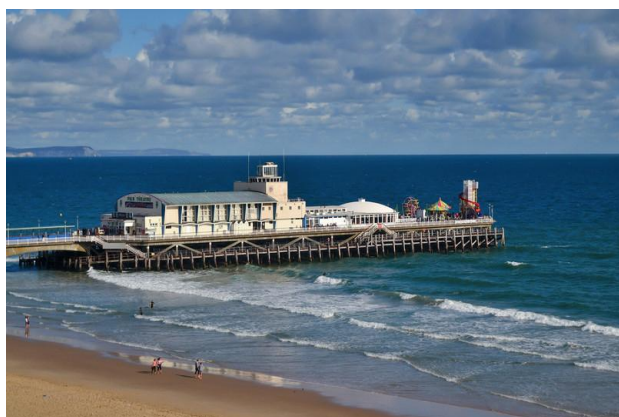

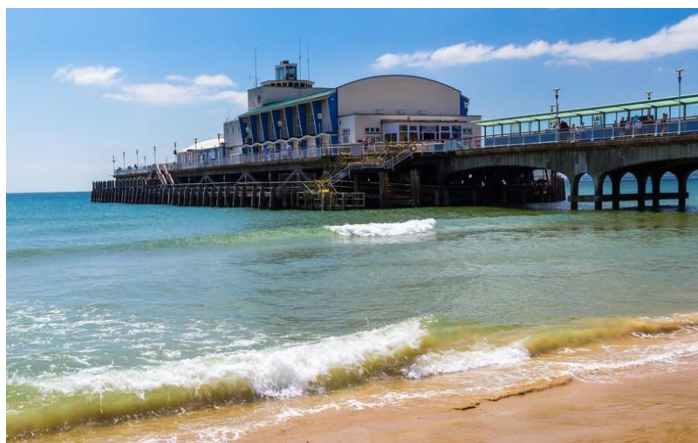

Client: Infologic

Sector: Public

Duration: 1 Week

The main administration office and main incoming ISP and server are separated by a marine grade fibre link from one end of the Pier to the other

Due to general wear and tear on the previous Fibre Optic Cabling a new fibre link was required to be installed by NM Cabling on behalf of the Pier operator

The cabling had to be installed and secured under the pier itself and co-ordinated with the tides due to safety constrictions and feasibility of installation.

The Cabling also had to be marine grade to withstand the hostile environments associated with the pier and its location
