

Project: O2 Arena – Sky Bar

Client: Alpha Bristol

Sector: Event Fibre Optic Cabling

Duration: 1 Month

For the Audio Visual Cabling requirements throughout the SKY bar at the O2 Arena in London, a vast amount of fibre optic cabling was used to run the screens, projectors and audio visual equipment

NM Cabling were tasked with terminating, testing and setting up all the fibre optic cabling throughout the bar and entertainment area.

There was also a Cat6 cabling requirement throughout for local cabling and controls

The work had to be carried out under strict timescales, health and safety and access requirements.

Fibre optic cabling terminations were undertaken in the main communications area and off access towers in the main areas due to the height that the projectors and screens were mounted, creating a challenging installation
