

Project: The Copperage, London

Client: Zoopla / Uswitch

Sector: Property

Duration: 4 Months

Zoopla was based in 3 separate offices in South East London and due to continued growth and expansion they and Uswitch had out grown their existing London offices. The decision was made to relocate all the offices to a single location at The Cooperage near London bridge

The project was a total new office fit out for which NM Cabling were appointed for the installation of the Structured cabling systems, Data Cabinets, Audio Visual Data Cabling and Data Cabling Patching

The project was taken from structured cabling design through to IT commissioning

Cat6 data cabling was the basis of the horizontal cabling throughout the offices, run through false floors and along exposed cable tray such was the industrial design setting of the building

Cat6a data cabling was also installed for the audio visual system and to a dedicated cinema room.

OM3 fibre optic cabling was also installed as data links between satellite areas within the building

A fully dedicated communications room was designed and installed where all 3 floors of data cabling terminated into.

NM cabling installed the racks not only for the structured cabling system but also racked and installed the cabinets for the Audio Visual system and other building control systems.

The Audio Visual equipment was also installed on behalf of the Zoopla audio visual installer

Upon completion of the horizontal IT Cabling and to keep continuity, Zoopla commissioned NM Cabling to patch in all of the IT Cabling, Telephone Cabling and WIFI Systems

This way a consistent data cabling patching installation was achieved and colour coded for ease of maintenance on their IT and Telephone cabling

The WIFI units were also mounted and commissioned along with the data cabling patching
